Strengthening capacity

The new production unit of Ryf AG

As the market leader for microscopy and optical measurement, control and test systems, Ryf AG always requires micromechanical CNC manufacturing expertise for in-house productions and customer-specific special solutions. With the acquisition of an established company and the founding of RYF PROTOTEC AG as a production unit, we have created the basis for expanding the in-house capacity in this sector. **As an overall company, we have become even more flexible and can offer you comprehensive customising «Made in Switzerland» solutions.**

Daniel Ryf
CEO and owner of Ryf AG and RYF PROTOTEC AG

Prototypes, small and medium series, assemblies ...

The know-how and infrastructure of RYF PROTOTEC AG are designed for the product-specific production of small parts, apparatuses and customising products for our parent company, Ryf AG.

Located in the «Mecca of small parts production», here in Grenchen we are also in the position to produce prototypes, small series and assemblies for customers from a wide range of industries. Important customers are the vehicle industry, mechanical engineering, the electronics industry and of course also renowned specialist companies from the watchmaking industry.

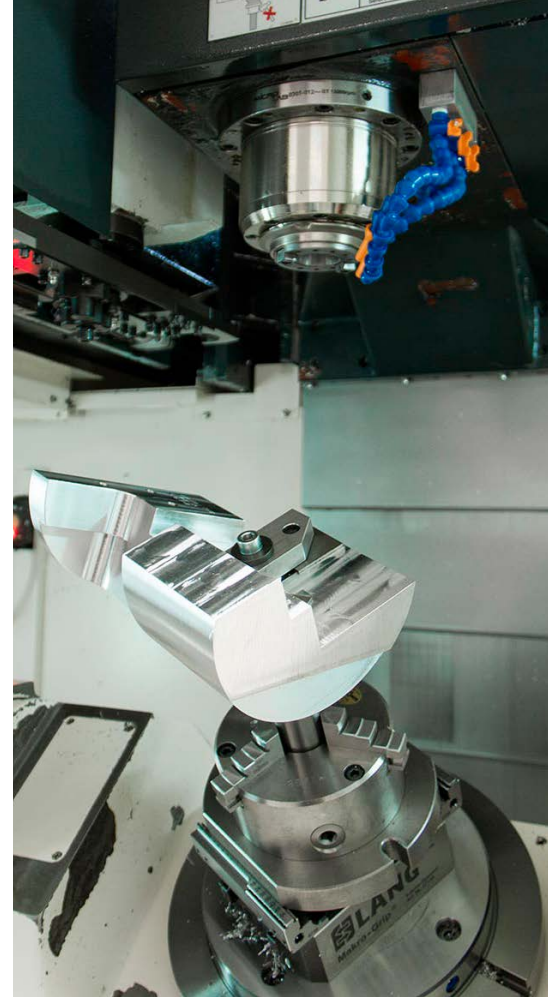

Modern machinery

Various CNC milling centres with three to five axes, CNC drilling and milling machines, CNC turning machines, centre lathes, as well as bed-type milling machines form the basis for the economic and high-precision production of prototypes, complex small parts and in-house produced assemblies. To this end, our parent company Ryf AG provides a range of the latest measurement systems and

test equipment, which allow for exceptional quality control and quality assurance of the manufactured parts.

Our customers determine the degree of finish of the manufactured small parts: Hardening, surface and cylindrical grinding, as well as coating of the high-precision CNC small parts is part of the standard repertoire of RYF PROTOTEC AG.

Examples from production

This selection of small parts shows the broad range of RYF PROTO-TEC AG for the production of high-precision small parts and assemblies in the usual Swiss quality. Good to know: Our production specialists are already available to help and advise you in the planning phase. – It is an aspect that is immensely important especially when developing prototypes. We know the different materials, possibilities and limits of machining technologies and have plenty of expertise dealing with parts finishing.

The committed Ryf Prototec team

In line with the motto «People make quality», committed specialists at RYF PROTOTEC with many years of experience take care of your wishes and ideas.

– You can also rely on our expertise with
CNC Production – it's worth it for you!

A brief company summary

The roots of RYF PROTOTEC AG go back to «Bisang Peter AG Feinmechanik und Prototypenbau», founded in 1995, which was later renamed «Prototec Tech AG». In 2023, Ryf AG acquired the company with the team of employees that have been dedicated for years and since then has continued to manage it as its in-house production unit under the company name RYF PROTOTEC AG.

The company is fit for the future thanks to major investments in the Grenchen location and many synergies with the parent company (keywords environmental protection, quality control and assurance according to the standards ISO 9001/2015 and ISO 14025). In addition to the work for Ryf AG, the existing customer base can still be served to the usual extent.
